

THE VIRGINIA MEMORY PROJECT

The first expansive web-based brain health registry in the Commonwealth of Virginia striving to support those with memory concerns, today and tomorrow.

Those who are cared for have a confirmed diagnosis of Alzheimer's or Dementia.

Dementia is not a disease itself, but an umbrella term for a group of symptoms. At least two of the following must be impaired in order to be considered dementia:

- Memory
- Communication and Language
- Ability to focus and pay attention
- Reasoning and judgement
- Visual Perception

The Virginia Memory Care Project is a survey for ALL adults in Virginia. In 2 minutes, answer questions about brain health, memory, and caregiving, and we will use your responses to pinpoint where more caregiving and memory support funds are needed. If you have brain health or caregiving need, let us know, and we will be happy to help--otherwise, your answers will be used to help others with brain health and caregiving needs. Giving your name is optional, and responses are stored in a secure database!

The Virginia
Memory Project

Clients identified needing help with activities of daily living including eating, bathing, or dressing due to memory loss or confusion.

Individuals who identified having confusion or memory loss experience an inability to work, volunteer, or engage in social activities

Individuals rarely discuss their confusion or memory loss with a healthcare professional

Participants identified rarely receiving help when needed with daily activities

Individuals identified having experienced confusion or memory loss causing them to give up daily activities
