For many, Diversity, Equity, and Inclusion (DEI) can feel overwhelmingly complex. This newsletter attempts to clarify important DEI concepts with brief, digestible resources that are thematically related to the monthly VGEC CIRCAA program curriculum. This month’s DEI keyword:

**Gender Dysphoria**

The feeling of discomfort or distress that might occur in people whose gender identity differs from their sex assigned at birth or sex-related physical characteristics. Gender dysphoria is a diagnosis listed in the Diagnostic and Statistical Manual of Mental Disorders (DSM-5), a manual published by the American Psychiatric Association to diagnose mental conditions. This term is intended to be more descriptive than the one that was previously used, gender identity disorder. The term gender dysphoria focuses on one’s discomfort as the problem, rather than identity. A diagnosis for gender dysphoria was created to help people get access to necessary health care and effective treatment.

Some things I learned from this month's newsletter

- Dementia can fundamentally change someone’s understanding of their own gender identity and the resulting social norms that are derived from one’s gender identity.
- Gender Dysphoria typically manifests very early in childhood, often between 4 and 7 years old. Untreated Gender Dysphoria can persist for many years until gender transition (social transition and/or hormonal therapy) which typically occurs between 22 and 27 years of age.
- Amazingly, the TEDx Talks video on gender dysphoria (!) linked below has a video summary that misgenders the speaker.

**Be informed**
